Item	Details
Project Name	Import Data using Transform Maps using Spreadsheet
Platform	ServiceNow
Data Source	Excel / CSV Spreadsheet
Core Components	Import Set and Transform Map
Project Type	Data Import / Data Migration

1. Purpose of the Project

The purpose of this project is to import data from an Excel or CSV spreadsheet into a ServiceNow target table using Import Sets and Transform Maps. The solution provides a structured way to upload spreadsheet data, map source fields to target fields, transform the data, and verify the imported records.

2. Use / Benefits of the Project

- Reduces manual data entry and repetitive work.
- Saves time when importing multiple records.
- Provides field-to-field mapping between the spreadsheet and ServiceNow.
- Reduces data-entry errors and improves consistency.
- Supports controlled data transformation before loading records.
- Makes data migration and bulk record creation easier.
- Allows imported records to be verified in the target ServiceNow table.

3. Project Execution / Working Process

Step 1 – Prepare Spreadsheet
Prepare the Excel/CSV file with column headers and the required records.

Step 2 – Load Data
Open ServiceNow and use System Import Sets / Load Data to upload the spreadsheet.

Step 3 – Create Import Set
ServiceNow creates an import set table to hold the uploaded source data.

Step 4 – Create Transform Map
Create a Transform Map and select the required target table.

Step 5 – Configure Field Mapping
Map each source spreadsheet field to the corresponding target-table field.

Step 6 – Transform Data
Run the Transform Map to transform the source records and load them into the target table.

Step 7 – Validate Results
Review transform results, errors, and imported records.

Step 8 – Verify Target Records
Open the target table and confirm that the imported records and field values are correct.

4. Final Output

The spreadsheet records are successfully transformed and imported into the selected ServiceNow target table. The final records can be viewed in ServiceNow and checked against the original spreadsheet to confirm correct field mapping and data transfer.

5. Technical Architecture

The solution architecture shows the flow of spreadsheet data through the ServiceNow Import Set and Transform Map components into the target table.

Technical Architecture – Spreadsheet Data Import using Transform Maps

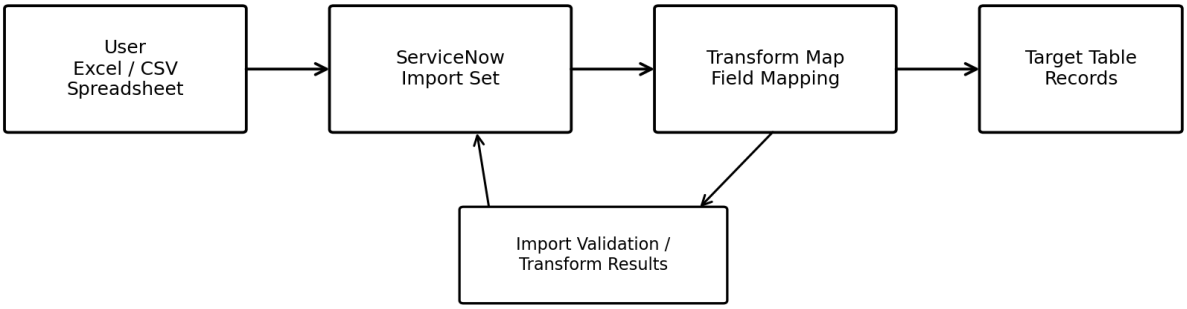

Table-1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	User prepares and selects the Excel/CSV file for import.	ServiceNow UI, Excel/CSV
2	Import Data	Uploads spreadsheet data into the ServiceNow import process.	ServiceNow Import Sets
3	Import Set Table	Stores source records temporarily before transformation.	ServiceNow Import Set Table
4	Transform Map	Defines the transformation and maps source fields to target fields.	ServiceNow Transform Maps
5	Field Mapping	Connects spreadsheet columns with corresponding target-table fields.	ServiceNow Field Maps
6	Target Table	Stores the final transformed records.	ServiceNow Database Table
7	Validation	Checks transform results, successful imports, and errors.	Transform History / Import Logs
8	Infrastructure	Hosts and runs the complete application and data-import process.	ServiceNow Cloud Platform

Table-2: Application Characteristics

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	No separate open-source framework is required for the core import process.	ServiceNow Platform
2	Security Implementations	Access to import sets, transform maps, and target tables is controlled through user roles and permissions.	ServiceNow Roles / ACLs

3	Scalable Architecture	Transform Maps support bulk processing of spreadsheet records and can be reused for repeated imports.	Import Sets / Transform Maps
4	Availability	The import functionality is provided through the ServiceNow platform and is available to authorized users.	ServiceNow Cloud
5	Performance	Bulk spreadsheet import and transformation reduce repetitive manual processing and improve efficiency.	Import Sets / Transform Engine

6. Functional Requirements

FR No.	Functional Requirement	Sub Requirement
FR-1	Spreadsheet Data Import	Upload Excel/CSV file into ServiceNow.
FR-2	Import Set Creation	Create an Import Set for the uploaded source data.
FR-3	Transform Map	Create and configure a Transform Map.
FR-4	Field Mapping	Map source spreadsheet fields to target-table fields.
FR-5	Data Verification	Verify transformed records in the target table.

7. Non-Functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import process should be simple and easy for authorized users.
NFR-2	Security	Only authorized users should be allowed to import and transform data.
NFR-3	Reliability	Data should be transformed and imported accurately.
NFR-4	Performance	The system should process spreadsheet records efficiently.
NFR-5	Availability	The import functionality should be available to authorized users when required.
NFR-6	Scalability	The solution should support increasing numbers of spreadsheet records.

8. Conclusion

The project demonstrates how spreadsheet data can be imported into ServiceNow using Import Sets and Transform Maps. By configuring source-to-target field mappings and validating the transformation results, the solution provides an organized and efficient method for bulk data import.
